

# Glycerin

## Description

### Glycerin

Q: Glycerin is that I was told it is a form of Alcohol, asking in some chocolates, biscuits, snack bars, etc. but still seems to be found

### Answer:

It is a syrupy liquid which is not an alcohol nor is it derived from alcohol. It is derived from plant source, e.g. Palm Kernel product of animal fat such as tallow. Widely which is free of animal derivatives. Plant and also synthetically manufactured obtained from animal fat is generally not acceptable since the fat is in all likelihood, source.
